

Jonathan Traylor

Boston, MA | 860-690-6499 | jjtraylor@gmail.com

EDUCATION

Khoury College of CS, Northeastern University

January 2021 – December 2023

Master's in Computer Science – 3.93 GPA

Relevant Coursework: Object Oriented Design, Data Structures and Algorithms, Graduate Algorithms, Network Fundamentals, Database Design, Computer Systems, Scalable Distributed Computing Systems

Providence College

August 2014 – May 2018

Bachelor of Arts in Economics, Political Science

TECHNICAL SKILLS

Languages and Frameworks: HTML, CSS, C, C++, Java, React, Python, R, Ada, SQL, VBA, Qt

Tools: Jenkins, Ansible, GitLab, Wireshark, MULTI, SonarQube, Cameo/MagicDraw

Certifications: Green Hills Software MULTI IDE and INTEGRITY RTOS Fundamentals

PROFESSIONAL EXPERIENCE

General Dynamics Mission Systems, Quincy, MA

May 2025 – Today

Sr. Software Engineer 2 - Engineering Leadership Program

- Rotated onto an underwater robotics project, applying C++ and distributed systems principles to integrate complex external hardware, including an Inertial Navigation System and Doppler Velocity Log.
- Served as Scrum Master for a robotics project; decomposed the Integrated Master Schedule into actionable sprint work and implemented process improvements that increased team velocity by 15% while improving delivery quality.
- Selected as architect for GDMS's internal AI assistant validation strategy; acted as liaison between IT and line-of-business users, defined the technical approach, and created scalable tasking for team members and future interns.

General Dynamics Mission Systems, Dedham, MA

August 2024 – April 2025

Sr. Software Engineer - Engineering Leadership Program

- Maintained significant contributions to the large defense project, taking on an expanded leadership role as a product owner for select application features. Responsibilities include application design and performing code reviews.
- Selected to join the GDMS Engineering Leadership Program. Completed a concurrent academic project covering requirements finalization, story grooming, system design, and testing, and conducted a CDR for company leadership.
- Led the execution of software requirements for the academic project; successfully architected and implemented a MVC Python/PyQt6 torpedo defense GUI.

General Dynamics Mission Systems, Dedham, MA

May 2023 – August 2024

Senior Software Engineer

- Led the successful execution of an Independent Research and Development project, showcasing a demo to the USAF. Project required the application of new technical skills including Ada, gRPC, and React.
- Successfully completed over 100 development tasks for a large, agile, mission-critical defense project, spanning full-stack object-oriented software engineering, DevOps enhancements, and UML/SysML modeling.

Northeastern University, Boston, MA

September 2022 – December 2022

Teaching Assistant – CS5001 Intensive Foundations of CS

- Taught weekly labs with 30 students implementing concepts from the preceding lecture. Concepts included solving problems with programming features, algorithm analysis, and object-oriented design.
- Developed custom materials for one-on-one tutoring sessions to help students understand difficult concepts and increase their curiosity in computer science.

Kessel Run (USAF AFLCMC/HBB), Hanscom AFB, MA

June 2022 – September 2022

Software Engineer Intern

- Developed a calculation micro-service with Java and Spring Boot for the USAF.
- Optimized GitLab CI/CD pipeline using directed acyclic graphs, reducing runtime by 50%.
- Supported the first integration of a micro-service into a client application via API, now actively used by the USAF.
- Integrated library to track endpoint usage metrics in support of agile user driven development.

The TJX Companies, Inc., Marlborough, MA

January 2022 – June 2022

Software Engineer Intern - IT

- Completed TJX Automation Course demonstrating proficiency in DevOps principles, Linux fundamentals and automation technologies with Jenkins, Ansible and Ansible Tower.
- Automated multiple start and stop procedures for various applications utilizing Ansible and Ansible Tower. Enabled non-technical users to quickly and safely start and stop their applications and supporting infrastructure.

- Assisted in developing Packer and Terraform files for a PoV; new technologies would allow for automated image creation and its provisioning across TJX's infrastructure.

Tsunami Tsolutions, Glastonbury, CT

March 2020 – January 2021

Program Management Analyst – Military Programs

- Managed the completion of deliverables across multiple aerospace projects, including an ERP implementation, technical systems support and technical records support. Customers within Raytheon Technologies.
- Synchronized internal teams from multiple siloed divisions to complete complex deliverables, ensuring that teams followed budgetary guidelines and quality control mechanisms.
- Facilitated the design and execution of solutions to unexpected problems that arose over the project lifecycle.

Tsunami Tsolutions, Glastonbury, CT

June 2018 – February 2020

Analyst – Finance and Operations

- Developed a reporting system to communicate project progress and expenditures to internal leadership and clients, standardizing metrics for repeatability across projects.
- Led and managed quoting efforts for over 100 projects. Worked with internal teams and customers to formalize requirements, build preliminary contracts, and establish labor estimates.
